

5 series piston diaphragm pumps

High dosing accuracy of +/- 1% (linear adjustable)

Flow rates from 0,065 to 2 x 1650 l/h

Back pressure up to 300 bar

Overload protection through integrated hydraulic valve

High process reliability thanks to multi-layer diaphragm

CE, EAC, API675, ATEX

5 series piston diaphragm pumps

sera piston diaphragm pumps

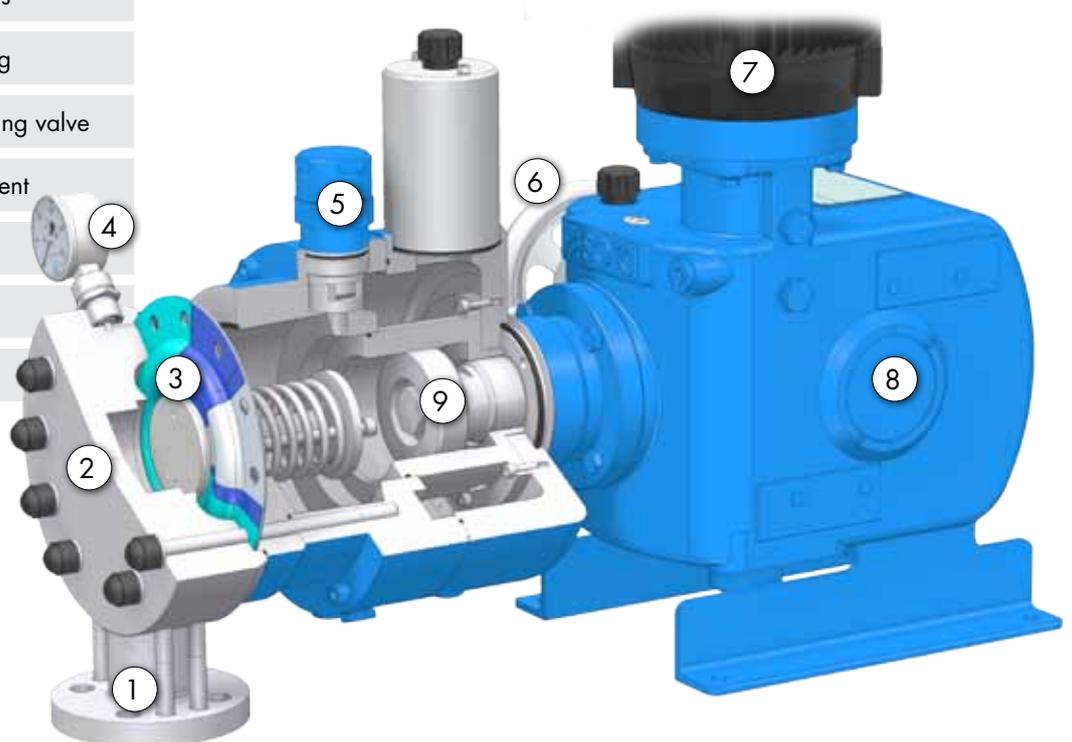

The 509.1, 510.1 and 511.1 series transmit the stroke movement of the mechanically linked piston to the multilayer diaphragms hydraulically. An integrated compensating valve guarantees outstanding dosing accuracy and optimal overload protection. The capacity can be varied via the stroke length, for which an adjusting eccentric is used.

Advantages at a glance

- Wide range of applications thanks to output ranging between 0.065 l/h and 2 x 1650 l/h with back pressure of up to 300 bar
- Exact dosing quantities thanks to the use of adjusting eccentric gears with harmonic motion sequence
- High operating reliability thanks to the advanced materials technology behind the hydraulically operated multilayer diaphragm
- Display of the diaphragm status by integrated diaphragm monitoring system.
- Integrated overpressure protection with internal pressure relief valve
- Other areas of application thanks to extensive accessories and design in accordance with ATEX and API standards
- Efficient IE2 motors (0.75kW motors and above) in accordance with EuP Directive as standard
- Optimal, customised design for almost any application thanks to standard modules from the **sera** range
- Leak-free dosing and therefore maximum safety for production and the environment. Suitable for hazardous, toxic and flammable fluids as a result
- CE and EAC conformity certificates
- Tested to internationally recognised standards

Applications and areas of use

OIL & GAS

- Pumping oil and natural gas (onshore/offshore)
- Dosing of chemicals, such as oxygen binders and corrosion inhibitors
- Dosing of defoaming solutions, biocides for preventing bacteria and nitrate to stop H₂S formation
- Dosing of flocculants and methanol for oil separation

REFINERIES

- Crude oil processing, e.g. chemical desalination
- Dosing of defoaming solutions and corrosion inhibitors
- Dosing of caustic soda and stabilisers

PETROCHEMICALS

- Dosing of chemicals for fission processes to convert hydrocarbons
- Dosing of phosphates, amines and bleaching agents
- Dosing of defoaming solutions in distillation and lubricants in reforming processes

CHEMICALS

- Manufacture of fertilisers (ammonia and urea plants)
- Nitrate applications
- Chlor-alkali electrolysis
- Sulphuric acid processes
- Dosing of urea
- Dosing of ammonia
- Dosing of solvents

POWER STATIONS

- Boiler feed water treatment
- Flue gas desulphurisation
- Dosing of ammonia solutions and hydrazine/levoxin
- Dosing of lyes and acids for water treatment
- Dosing of urea and ammonia for denitrification

ENERGY

- Biogas production
- Dosing of bio fuels
- Dosing of phosphoric acid as a catalyst

PHARMACEUTICALS & COSMETICS

- Enzyme production
- Dosing of caustic soda, nitric acid and hydrogen peroxide for CIP processes
- Dosing of additives

Materials

The high quality of the materials guarantees long-term, operationally reliable use.

Pump bodies and valves

1.4571

Valve balls

1.4401

Valve seals

FEP coated

Working diaphragms

PTFE (3-layer)

Other materials such as Hastelloy, Duplex, PVDF on request.

Drive

The drive unit consists of a reliable motor brand, coupled with a stroke mechanism in a robust cast housing.

sera cast housings cope with even the harshest conditions. Material thickness and surface treatment withstand even chemical attacks and are designed in accordance with EN ISO 12944.

Connections

The pumps are installed in pipelines by means of threaded connections (ISO 228 or NPT) or flange connections (DIN or ANSI).

Control

The flow rate of the piston diaphragm pump can be constant or controlled continuously.

Manual flow rate adjustment with:

- Changes to stroke length by means of eccentricity adjustment device
- Reproducibility +/- 1% at 10 - 100% stroke length

Automatic flow rate adjustment, depending on analogue input signals, with:

- Three-phase motors with frequency converter for stroke frequency adjustment
- Actuators with positioning controllers for stroke length adjustment

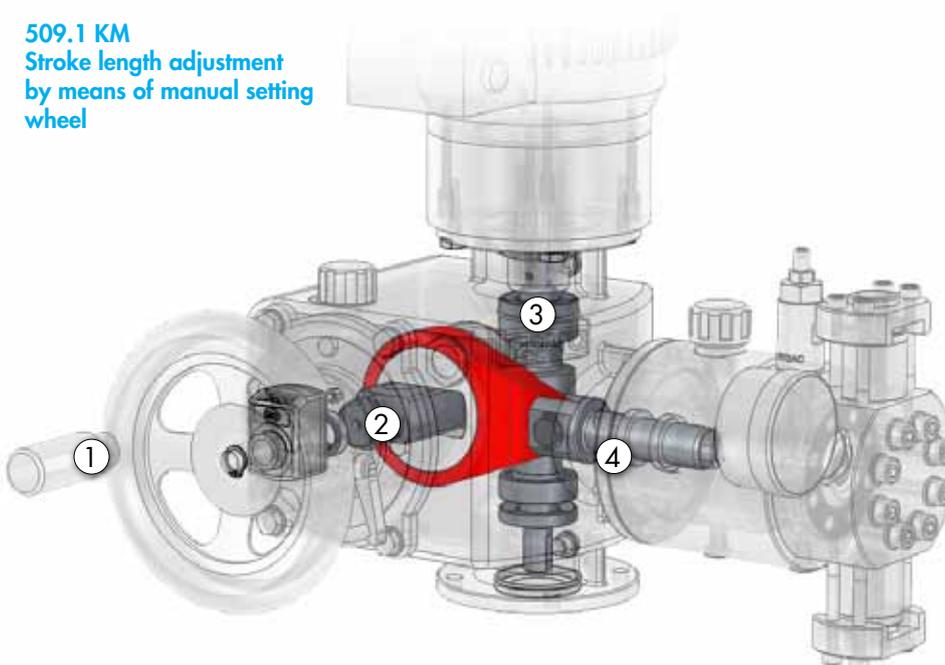

Special designs

We offer an individual solution for special dosing tasks: duplex or triplex design, heating or cooling devices for the pump body.

Accessories

We supply all of the accessories required for optimal installation of dosing pumps, including pulsation dampers, safety valves, dosing tanks, flow controllers, and so on.

509.1 KM Stroke length adjustment by means of manual setting wheel

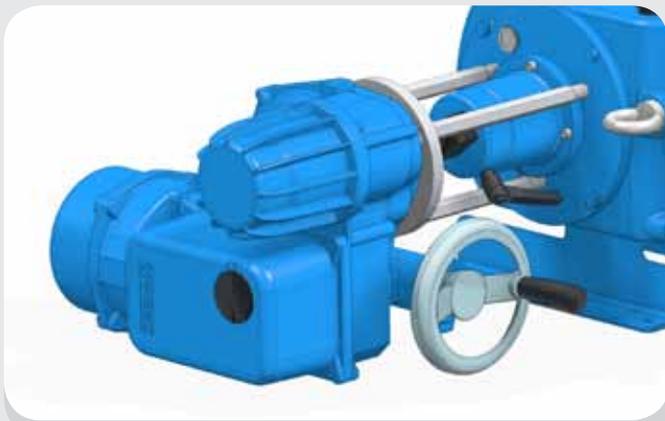

1 Setting wheel

2 Eccentric shaft

3 Driven shaft

4 Piston

Options

Electric actuator for stroke length adjustment

The electric actuator allows automatic stroke length adjustment by means of a control unit, making manual setting a thing of the past.

The actuator turns the eccentricity adjustment device in and out to the flow rate required.

Optical diaphragm monitoring

If the operating diaphragms are damaged, the medium follows through a hole under pressure to the signal pressure gauge and causes a needle deflection.

Diaphragm monitoring with pressure switch

If the diaphragms are damaged, pressure builds up in the pressure switch. The signal produced can then be processed.

Stroke frequency sensor

sera dosing pumps are oscillating positive displacement pumps with a precisely defined stroke volume per pump stroke. The stroke frequency sensor records the individual pump strokes and sends the information for every stroke to the evaluation unit.

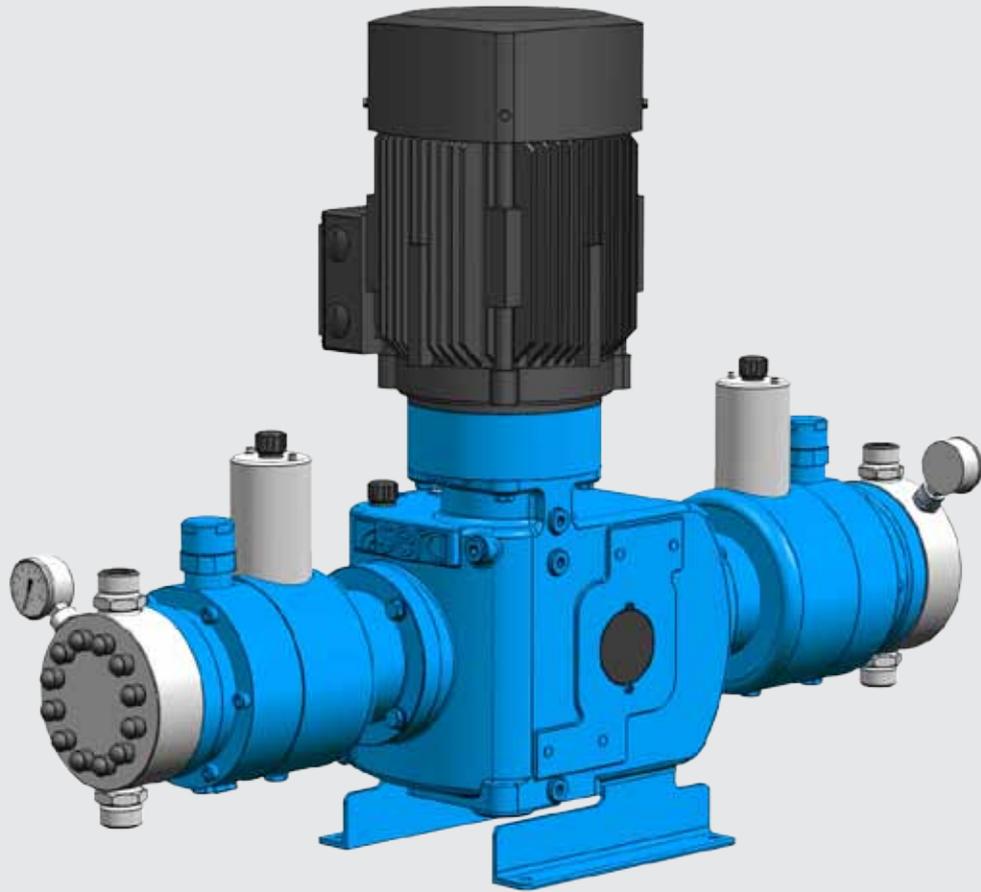

Customer-focused design comprising intelligent building blocks

Piston diaphragm pumps in modular design through adaptation of pump bodies or the combination of motor housings

- Solutions for various process requirements
- Design based on individual elements
- Combination of different sizes possible
- Suitable for dosing mixtures
- Low pulsation thanks to overlapping component currents

BOXER model for twice the power!

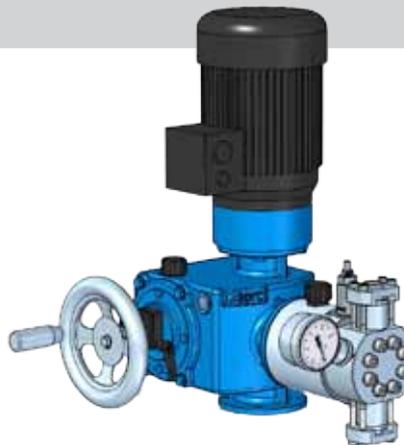

DUPLEX or TRIPLEX model for greater power with low pulsation, optimal adaptation to the available space!

Dosing skids

Thanks to our extensive accessories, the intelligent combination of the **sera** modular design and our experience in system construction, we are able to offer complete dosing skids and package units. Our strengths lie in customised design, including competence in detailed engineering, production, assembly and project-specific documentation. Simple implementation into the planning of your entire system is made possible by extensive CAD data.

Dosing skid for corrosion inhibitor

- ATEX, API675, EAC
- 54 l/h, up to 160 bar
- Pulsation damper fitted
- Electric actuator for integration into PCS

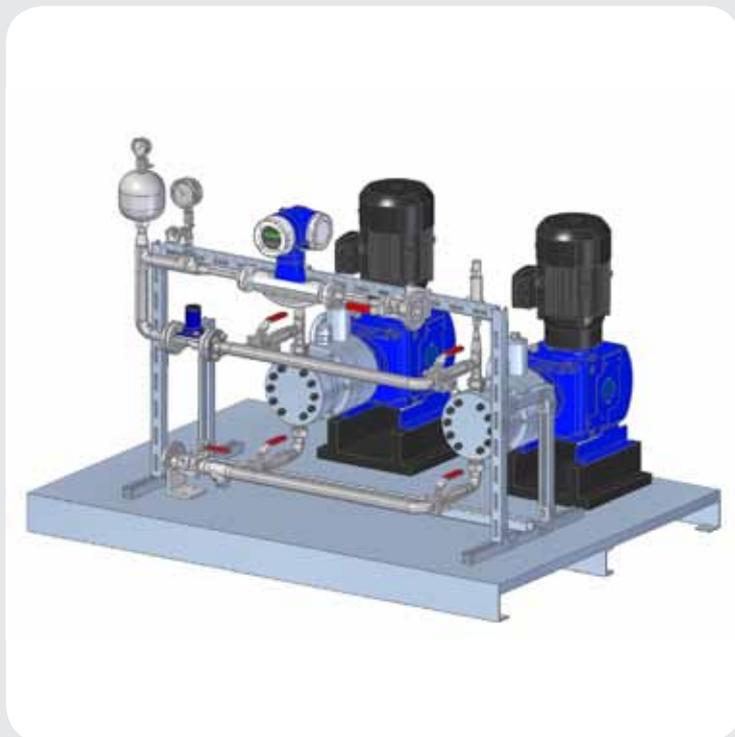

Dosing skid for trisodium phosphate

- ATEX, API675
- 37 l/h, up to 180 bar
- Storage tank 200 l
- Piping with pulsation damper, pressure measurement and safety valve

Dosing skid for methanol

- ATEX
- Standby pump
- 1450 l/h, up to 25 bar
- Piping with safety valves, pulsation damper, pressure measurement device and mass flowmeter

Dosing skids

Dosing skid for trisodium phosphate

- 20 l/h, up to 140 bar
- Storage tank 200 l
- 2 dosing lines, each with a standby pump
- Piping with pulsation damper, pressure measurement, safety valve and automatic flushing device
- Complete system with on-site control and communication with PCS

Dosing skid for methanol

- 4 x 400 l/h, up to 10 bar
- Common suction pipe with automatic valves
- Piping with pulsation damper, excess flow valve and check valve
- Complete system with stainless steel base frame, drip tray and leakage monitoring

For our customers on-site worldwide

With our headquarters in Germany and subsidiaries in England and South Africa, as well as a global sales and service network with over 30 representatives abroad in more than 80 countries all over the world, **sera** guarantees optimal customer care on site.
